

ML Revolution in Odisha

Presented by : Ashutosh Ashirbad Tripathy

Who can be a part of this revolution?

- Every Odia can be a part of this and they can contribute as per their own experience and age group.
- For now, we need to focus on Technical professionals, Engineering, MCA students, and odia language activist.
- As we need to have more mentors and people to contribute to the community. So we need to invite more Volunteers, Tech professionals, and Odisha lovers to our community.

Problems and misconceptions in our society

- Our young masses are trying for a government job only.
- Peoples think that the IT profession is not secure enough .
- The young enthusiast thinks that they can't get a chance to serve the nation in the IT profession their service will limit to an individual only.
- Indian TV shows create a conspiracy that the IT job is not cool enough. IT Professionals are leaving their job and adopting photography and blogging as a profession..

Awareness

- Parents and teachers are playing the most important role to guide students to build their carrier. In order to create awareness we need to make these AI/ML things understandable to parents also.
- Most educated parents and teachers like to read newspapers. We can reach out to them by publishing an article in local newspapers.
- We can put an ad campaign on youtube to create awareness among students.

Print media

- Popular newspapers like Samaj, Sambad, Dharitri, The Indian Express etc.
- Employment newspapers like Nijukti Khabar , Employment News .

Social media.

- Youtube
- Facebook
- LinkedIn

Literacy

- We need to have more and more numbers of open source content in odia .
- We should have a forum like StackOverflow for community support.
- As we know our entertainment industry is shifting toward gaming platforms we need to literate teenagers about ML using games.
- Most people use ML in day-to-day life but they are not aware of it. We can literate people by addressing those things.

Application of ML

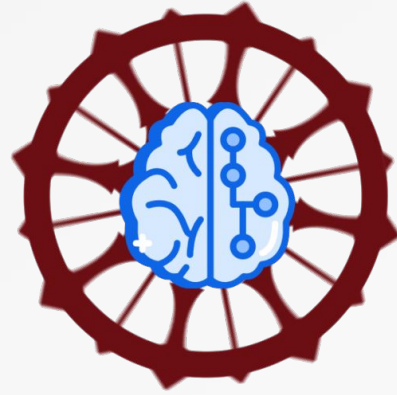

- We need to create a promising platform using ML to fight unemployment in Odisha.
- We need to develop some mobile application websites for the famous non-IT Odia industries so that every Odia can take advantage of ML and AI.

Example of Application of ML

- Recommending tourist places of Odisha to the people from outside as per their interest.
- Creating an e-commerce website for Odia art and craft with a feature of ML-based recommendation.
- ML-based Odia language processing so that Outsiders can communicate with Odia people.
- Creating various ML applications so that Odisha can be identified on the global map and companies will invest in Odia-related things.

ଧନ୍ୟବାଦ

Thank you
